

LUMOS MOUNTING & FINISHING

instructions

Lumos Mini Tower

Lumos Midi Tower

Lumos Maxi Tower

Lumos Counter

Lumos Double Tower

Introduction

Media

The Twist display range is designed to work best with 175 micron back-lit material, with a 125-150mic laminate. Using this media will enable all elements of the Twist range to meet its high standards and allow the user to fully appreciate the ease and beauty of the system; using any media other than the recommended weight may result in your product not working as required.

Useful Materials

In addition to your standard finishing apparatus we strongly recommend the following materials to be stock items when working the Lumos display range:

- 175mic back-lit film
- 125-150mic laminate
- 12.5mm magnetic tape (polarity A)
- Webbed tape
- Tessa tape

Finishing Lumos Graphic Panels

Instructions

There is no hidden area on Lumos graphic panels; for example if you have a 648x830mm Lumos Mini Tower, your graphic panel will be trimmed to 648x830mm.

1. Trim your graphic to the correct size.
2. It is recommended that magnetic tape (polarity A) should be applied to all graphic panels along the vertical sides; be sure to put the magnetic tape at the very edge of the graphic panel with no overlap.
3. Before rolling your graphic allow curing time for the adhesive.
